

TECHNICAL EXHIBIT 8.1
PERFORMANCE REQUIREMENTS SUMMARY (PRS) TABLE

The purpose of this attachment is to:

a. List the contract requirements and work requirements considered most critical to satisfactory contract performance (See PRS Column 2).

b. Summarize the standards of performance in the specification for each specified work requirement (See PRS Column 3).

c. Provide Acceptable Quality Level (AQL): Acceptable Quality Level (AQL) for each work requirement (See PRS Column 4). The AQL is the defect rate in a population of services which, when exceeded, indicates the Contractor's quality control is not effective. The AQL does not represent a threshold for payment deductions. Deductions are taken for all defects (with appropriate credit for rework) regardless of whether the AQL was exceeded.

d. Identify primary surveillance method (See PRS column 5)

d. Specify the percentage (weight) of contract requirement attributable to each listed work requirement (See PRS Column 6).
