

Safety with Uber Health

Jeff Metz

At Uber, we Stand for Safety

As a global mobility platform, we embrace our role in helping create a safer road experience for everyone.

We embed safety into everything we do. At Uber, we strive to enhance our safety measures and implement best practices to help create a safe and comfortable environment for improved mobility. We know the work of safety is ongoing, yet we can and will challenge ourselves to always be better for the communities we serve.

At Uber, Safety never stops.

Core features and ongoing technological innovation

HIPAA-enabled Health platform

Business safety integrations and protections

Table of Contents

1. Preventative Safety Features
2. Proactive Monitoring Tools
3. Reactive Response
4. Your Role in Safety

Data safety and privacy

Uber maintains ISO 27001 certification for its enterprise business (Uber for Business, Central, and Uber Health) and core rides business. Additionally, an independent third party regularly assesses Uber for SOC 2 compliance.

Privacy & Compliance

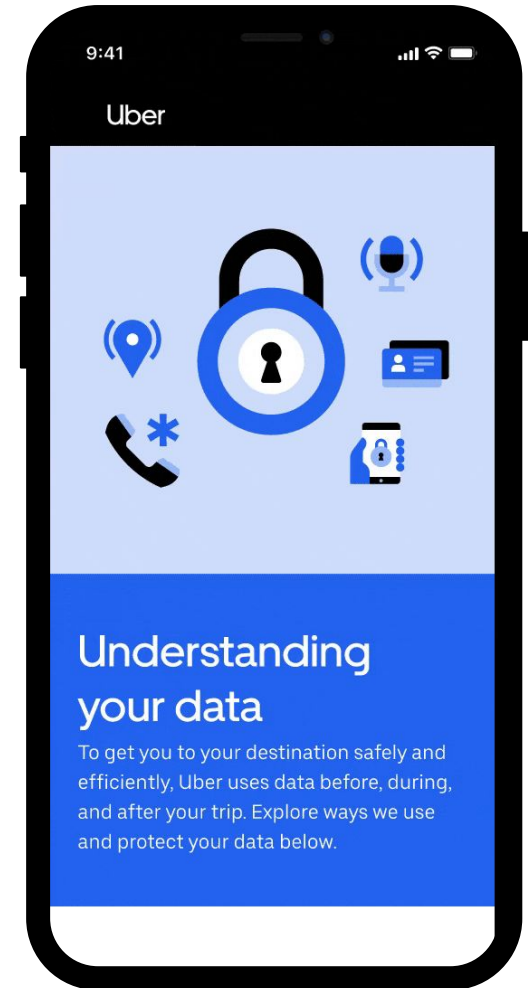

- Our HIPAA-enabled healthcare platform requires a Business Associate Agreement (BAA)
- Uber enforces robust security controls, including encryption and strict access restrictions, according to the relative risks and repercussions associated with the type of data

Managing User data

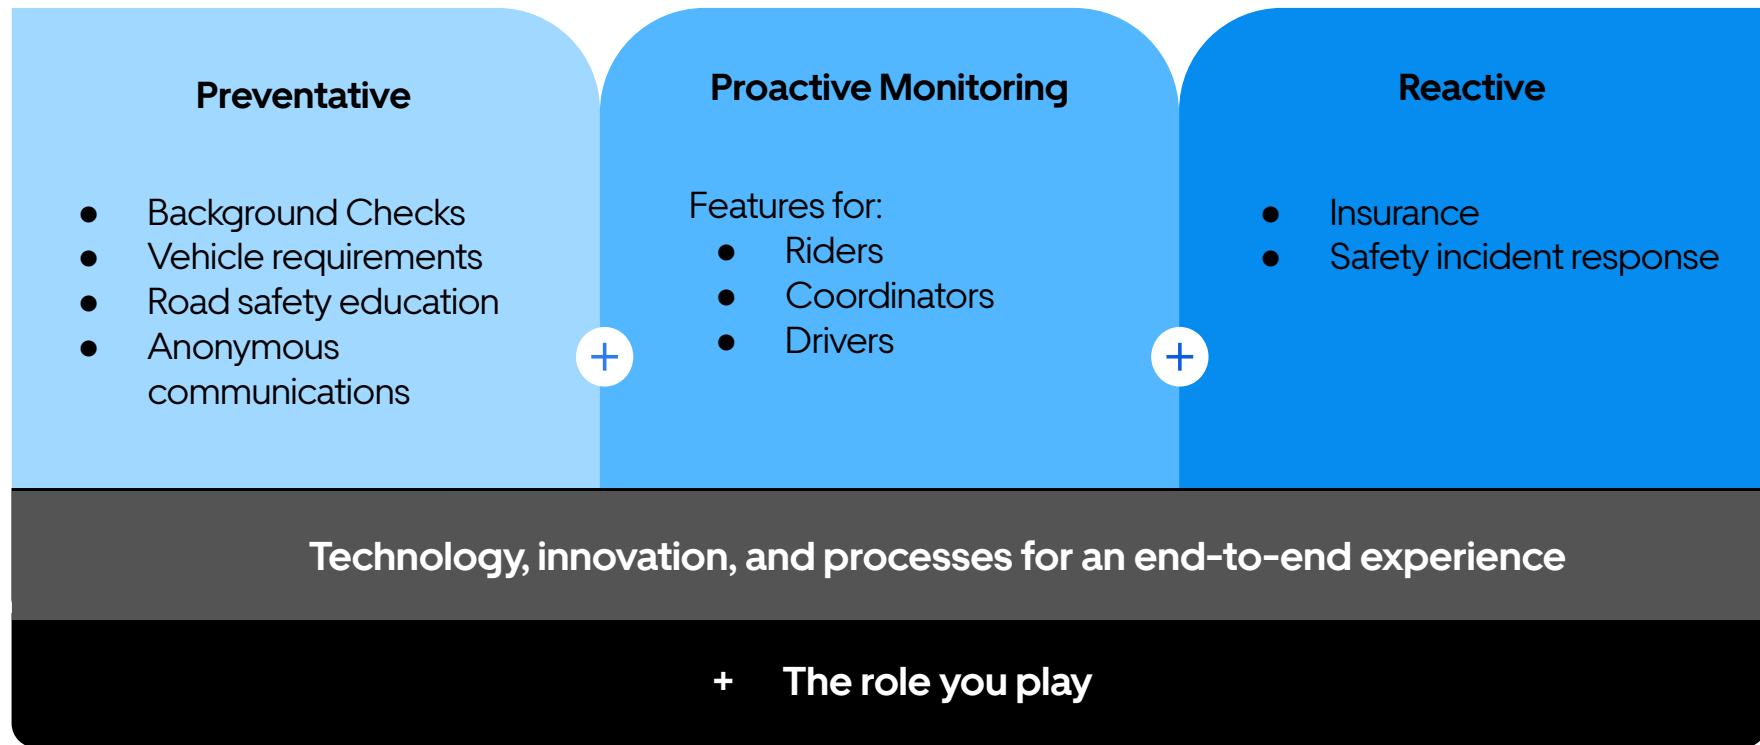

- Ongoing HIPAA and data security training to employees
- Customer data is stored by Uber in cloud data centers across the United States with stringent physical and digital access controls.

Keeping User information private

- Committed to user privacy and implementing strict security controls for handling and sharing patient data.
- Our system employs secure encryption and anonymization techniques to help ensure that all sensitive information shared with Uber remains confidential.

Trip Safety: Safety before, during, and after every ride

Preventative

Driver & Courier screening in the US

We screen all drivers and couriers for criminal and driving history before they can begin using Uber.¹

This includes:

- Driver pre-screening and documentation
- Driving history review
- Criminal history review
- New offense notifications, where available
- Annual reruns
- Federal and state healthcare exclusions

¹ In New York City, background checks, including reruns, are managed by the Taxi and Limousine Commission and not by Uber.

Initial Background Checks & Screening in the US

Driver background checks and screenings

Every US driver undergoes a screening before their first trip. This includes a Motor Vehicle Record (MVR) review and a criminal history background check. Drivers for Uber Health also receive checks for exclusion and debarment from Federal and State Healthcare Programs, including OIG exclusions.

- Uber's screening process consists of several identity safeguards, including a review of identity information such as a driver's license information, Social Security number, and proof of insurance.
- In the US, we also collect and examine a driver's background history through a third-party vendor accredited by the Professional Background Screening Association. These checks are rerun, at a minimum, annually*.

Disqualification standards

Drivers cannot access the app if they have any felony convictions or any violent or other disqualifying misdemeanors in the last 7 years. Our process also reviews records from more than 7 years ago, as allowed by law and where those records are made available and reported to us. Additionally, drivers permanently barred from participation in Federal or State Healthcare programs cannot operate on the Uber Health platform.

**Annual driving history reruns do not apply in NYC.*

Ongoing Screening in the US

Yearly background reruns and ongoing screenings

Beyond the initial screening, Uber reruns criminal and motor vehicle checks each year*, and also checks for exclusion and debarment from Federal and State Healthcare Programs. This is a standard practice for Uber Health, regardless of whether there is a statute or regulation requiring us to do so.

We also use technology to continuously check records to strengthen our screening process. This technology is used where available and legally permitted to continuously receive information from data sources to detect whether a driver is involved in a new criminal offense or regulatory sanction, and it notifies Uber when this is the case. If an offense involving an active driver is identified, our screening team reviews it to evaluate the driver's continued eligibility with Uber, and removes them from the platform if the driver is found to no longer meet Uber's screening criteria and the criteria set forth in local laws.

** Annual driving history reruns do not apply in NYC.*

Annual reruns

We proactively rerun driving and criminal history checks, as well as healthcare regulatory sanctions checks, annually – and more frequently, in some cities – following each driver's initial check to ensure that they continue to meet our standards.

Ongoing notifications

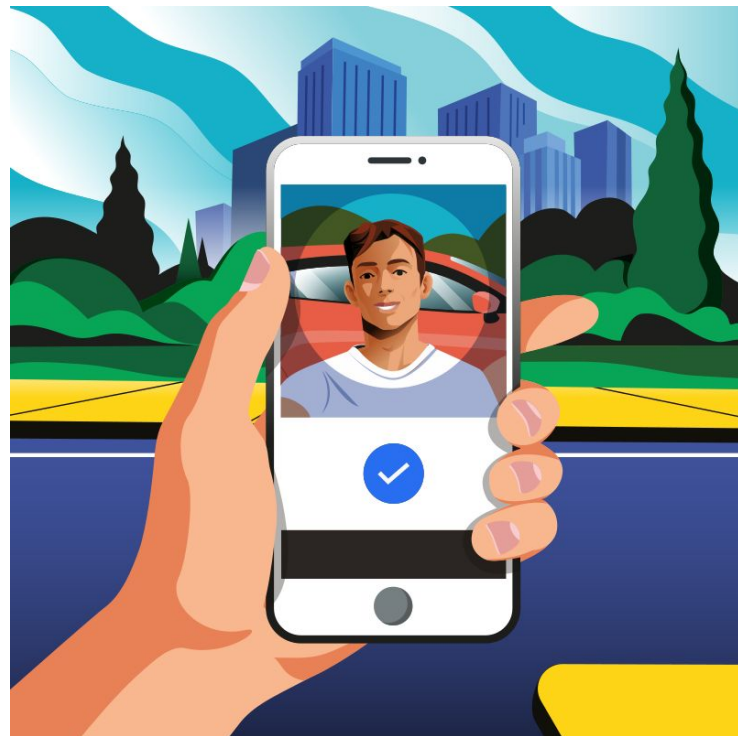

We use technology that proactively fetches new criminal offenses or healthcare regulatory sanctions so that we're notified if a new offense involving an active driver is identified.

Refined Supply Criteria for Uber Health Drivers

Refined Criteria

To meet the unique needs of patients and providers, Uber Health's driver pool is refined to only those who meet elevated account history and safety standards — without compromising network or scale.

By adding these rigorous filters to our already trusted platform, we ensure every ride is powered by drivers who meet our highest expectations — at the scale healthcare depends on.

Vehicle Requirements

Uber has minimum vehicle requirements* to help ensure the safety and comfort of our riders. These minimum requirements may include:

General Minimum Vehicle Requirements

- 16 years or newer vehicle model
- No salvage/rebuilt titles
- 4 doors
- 5 seat belts for X, 7 seat belts for XL

Uber 3rd party NEMT

- Ambulatory and Wheelchair Accessible Vehicles (WAV)**
- Door-to-door driver assistance provided
- Drivers are third-party, W-2 employees not on official Uber network
- Drivers receive training for Non-emergency Medical Transport***

*Only available in select locations; provided by 3rd party

**Usable indoors, whether operated manually or powered that are 32 inches or narrower

***Drivers training is performed by transportation companies that partner with Uber Health. Other mandated training may depend on requirements from local jurisdictions.

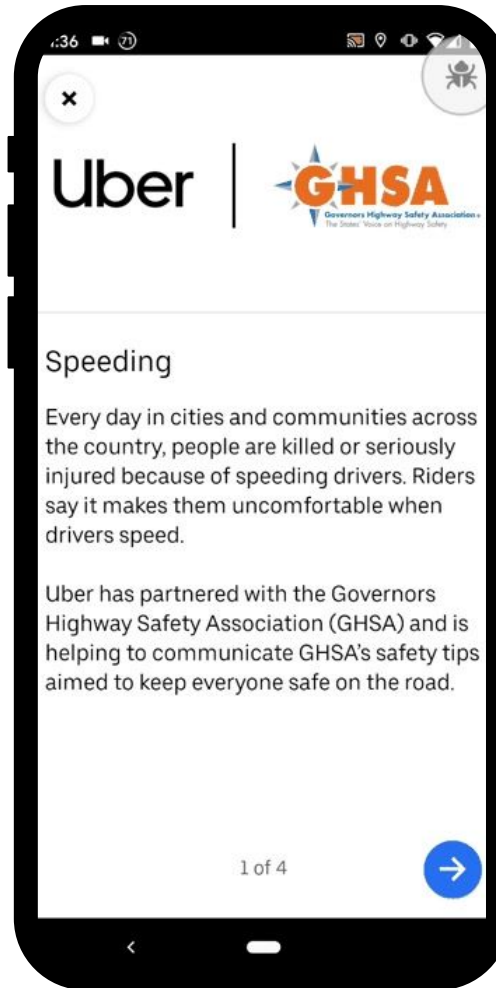

Driver onboarding includes road safety education

Governor's Highway Safety Association: Uber helps produce educational content for all drivers at onboarding which covers:

- Speeding
- Distracted Driving
- Navigating Intersections

Distracted Driving Awareness Month: Uber participates in providing contextual educational videos for all drivers

“Project Zero” initiative: Uber has formed a coalition with GHSA, the League, the National Safety Council, and Mothers Against Drunk Driving

Uber Joins Road Safety Advocates in Calling for National Vision Zero Commitment

By Kristin Smith, Head of Global Road Safety Policy

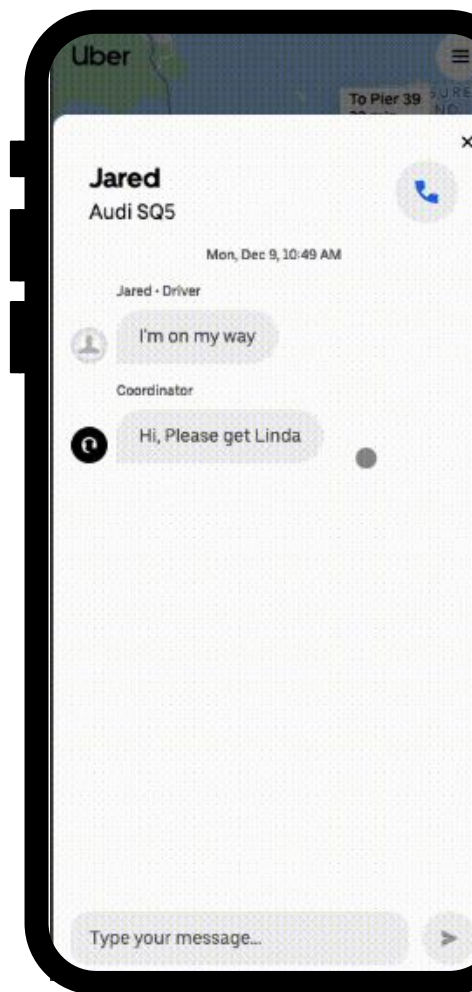

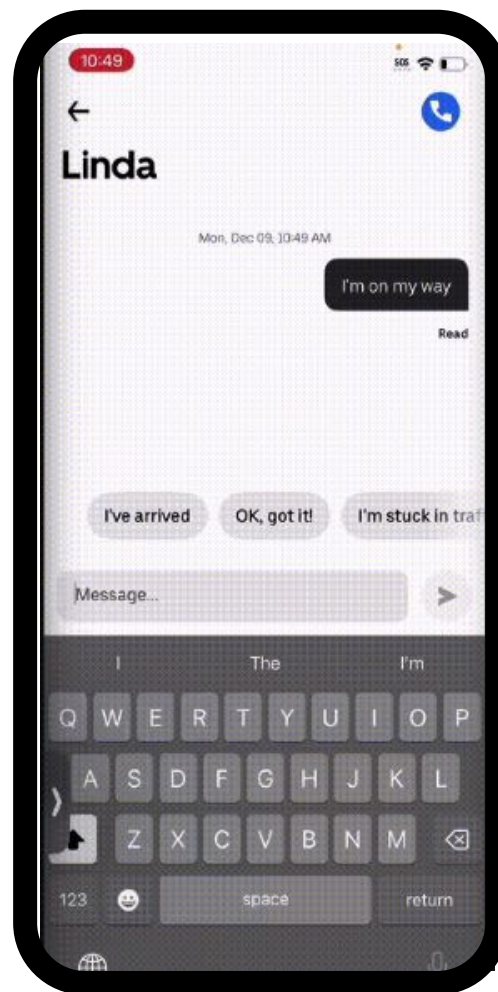

Nearly 40,000 people lose their lives on our nation's roadways every year, and traffic crashes are the leading cause of death for people under 25 years old. But it doesn't have to be this way. Uber is committed to being a strong partner in road safety. That's why we are joining a coalition of national road safety advocates in [asking President Biden](#) to commit to a goal of eliminating traffic fatalities in our country by 2050. This would put the US in line with 144 other countries who signed onto this

Anonymous Communications

Drivers only get rider's **first names**, and are not told that it's a healthcare trip, or the name of the organization requesting the trip.

Guests with smartphones **can directly message drivers or coordinators*** to communicate trip pickup or delivery information with ease. Uber's encryption technology ensures that everyone's phone number stays private.

*Available only to guests with smartphones. Webview only.

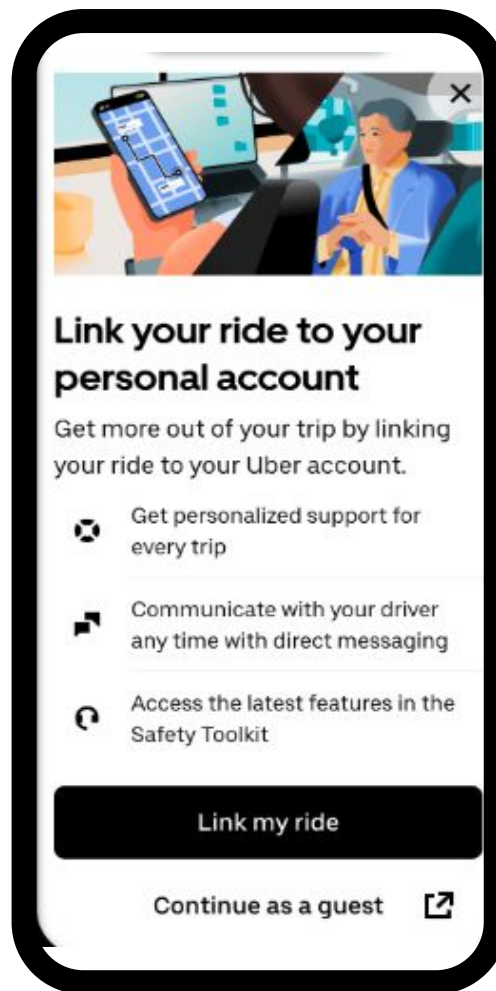

Proactive

Full suite of in-app safety and support features when riders link health trips to their Uber account

Guest riders with smartphones can link their Uber Health trips with their Uber account for added security and personalized trips. Linking accounts enhances the experience between riders, coordinators and drivers by:

- Unlocking full rider access to Uber's robust safety and support tools (e.g. RideCheck, live chat w safety agent).
- Shares rider location with driver and enables riders to chat drivers for reliable pickups and dropoffs.
- Provides riders the ability to rate their trip, improving accountability.
- Reduces administrative burden for Healthcare coordinators since riders can self-report issues (e.g. lost items).

Driver ETAs & communication for all smartphone users

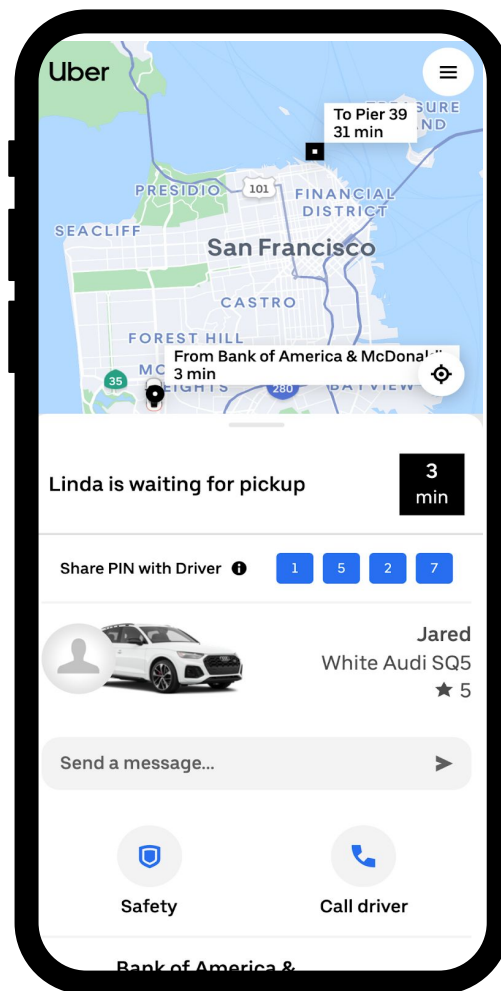

Seamless and reliable trip updates*

Guests with smartphones can receive a webview link that allows them to **view driver ETA** to reliably plan their trip. Guests can communicate clear instructions for pickups by **directly messaging their driver**.

For frictionless transportation and prescription deliveries, guests can view messages between the trip coordinator and the driver.

Riders without smartphones will get driver ETAs by SMS and will be able to call their drivers.

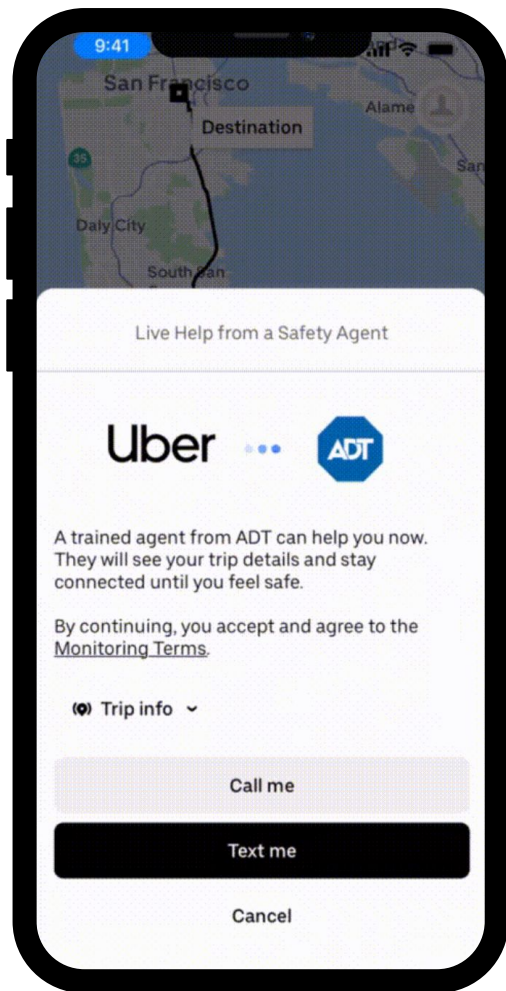

*Available only to guests with smartphones. Webview only.

Live Help from a Safety Agent

Uber has partnership with ADT to provide live, on-trip support to riders.

In situations where a user may feel anxious or potentially unsafe, they can call or text a safety agent from ADT. Those agents can provide **real-time support to give users peace of mind** and can even contact emergency services on the rider's behalf if needed.

Coordinator alerts when intervention is needed

Enhanced Visibility

With the Uber Health dashboard, coordinators can see the time, date, and pickup and dropoff locations of trips taken with your user's business account—all at a glance.

The **Attention Needed** feature allows coordinators to view when a rider was not picked up and quickly follow-up and reschedule appoints to help ensure that patients aren't overlooked.

The coordinator who requested the ride will also get an email if the ride is cancelled or not matched with a driver.

Resolve 

Share Trip Status

Added peace of mind

Coordinators can share a guest's trip status with up to three **Trusted Contacts**.

Share Trip feature sends Trusted Contact(s) an SMS notification with a link to view guest trip status, ETA, and driver and vehicle information (license plate, car make/model, etc).

RideCheck: Enhanced safety, proactive support

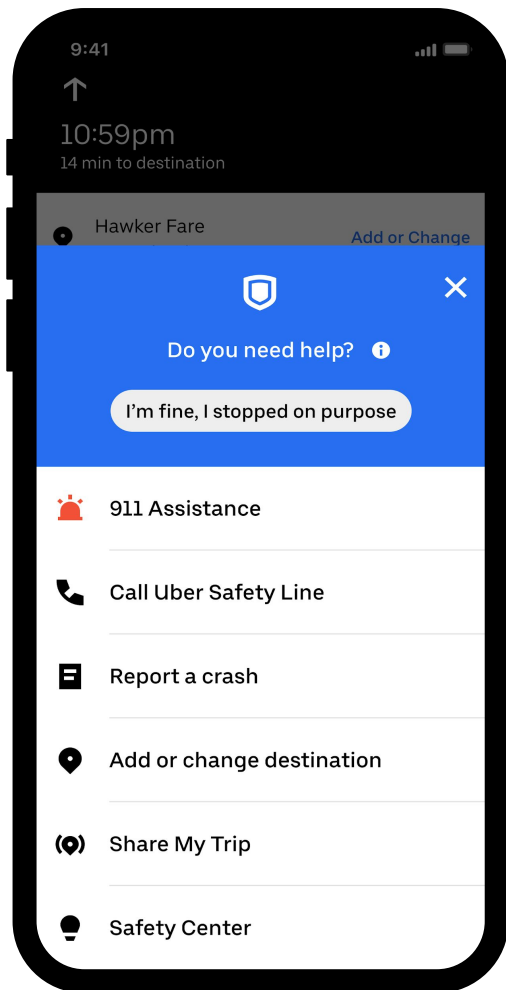

Available to drivers in the US to detect unexpected on-trip events

By using sensors and GPS data, RideCheck can help detect an unexpected long stop or a possible crash, route deviations and midway drop offs, and check in to provide support if needed.

When a RideCheck is initiated, the driver will receive a notification asking if everything is OK, and if any assistance is needed.

Available for all drivers and riders* across the US.

**Available to guests who link their personal Uber accounts with Uber Health.*

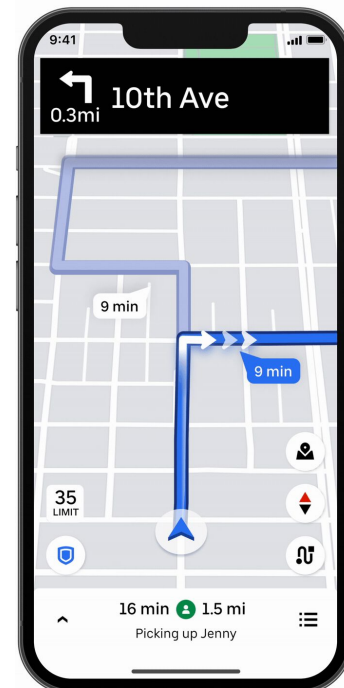

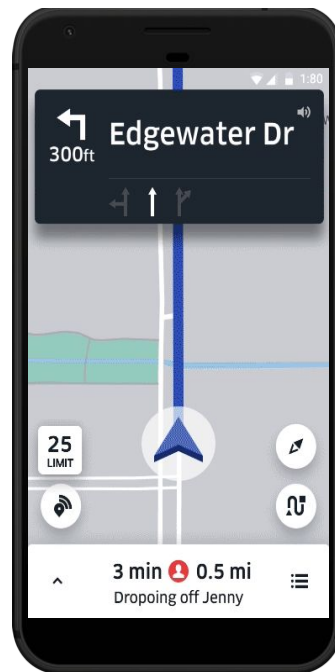

Safety tech to help reduce risk

We believe prioritizing driver safety is key to providing an exceptional customer experience. We've updated our in-app Driver Safety features, tools, and navigation to equip valued drivers with all the resources and know-how for a reliable experience on our platform.

- **Left Turn Reduction:** We've improved in-app navigation to suggest fewer left turns with little to no impact on travel time.
- **Uncontrolled Intersection Alert:** We assist the driver by informing them about an approaching uncontrolled intersection, where the cross traffic doesn't stop.
- **Speed Limit Alerts:** The driver app displays the speed limit of the current road and sends alerts when driving above that limit.

Available for all drivers across the US.

Reactive

Auto Insurance to Help Protect Riders

\$1 million of liability coverage on trips.

Leading auto insurance providers help protect riders and drivers on the Uber app. Uber maintains commercial auto insurance in case of a covered accident on rideshare trips, including at least \$1 million in liability insurance on behalf of drivers once a ride is accepted.

US market only. Insurance liability coverage will vary depending on the local market.

**AIG insurance coverage is limited to New Jersey, only.*

What happens if there's an incident on a trip?

Uber's Incident Response Team (IRT) is in place to quickly respond to the most urgent issues.

If we receive a report about an incident during or after a ride, we can quickly suspend the driver or rider accounts in question, preventing them from accessing the Uber app, while we investigate.

Visibility into Patient Safety

Currently available on all Uber Health rides

Specialized support for Uber Health

Dedicated incident support

- Uber Health has a dedicated support team for safety incidents.
- Support teams can act swiftly and take actions such as preventing drivers from operating on the platform while an incident is under investigation.

Empathy & training

- Among the communication trainings offered are those specifically focused on fostering empathy and engagement with both patients and drivers.
- Regular re-training sessions are provided to help agents elevate their communication skills and adapt more effectively to a wide array of situations.

Accidents Happen – We’ve Got You (and Your Riders) Covered

We are committed to the safety of everyone using our platform. If your riders have been involved in an accident, please make sure that you and all parties involved are safe. Immediately notify police and paramedics if necessary. From there, we’re here to help.

Contact

Within 48 hours of your report, our insurance adjuster will contact you to see if it’s okay for us to contact your rider. This will allow us to document and process the accident and claim.

Document

The insurance adjuster will contact the rider and obtain a fact statement about the accident, including any supplemental documents.

Resolve

Our claims team and your rider will work together directly to resolve the claim appropriately.

The role you play

Follow our Community Guidelines

[Our guidelines](#) were developed to help make every experience feel safe, respectful, and positive. Everyone who uses Uber's platform is expected to follow the guidelines—that includes earners, riders, and admins and coordinators. We update our guidelines regularly to help ensure everybody in the Uber community always feels safe and welcome.

These guidelines are building blocks of our community and help foster an environment of safety across our platform based on three principles:

1. **Treat everyone with respect:** We believe that everyone should feel supported and welcomed when interacting with others in the Uber community. That's why we've created standards and policies on threatening and rude behavior, post-trip contact, physical contact, discrimination, sexual assault and misconduct, and property damage. When booking on behalf of others, respect also means ensuring the rider is capable of engaging respectfully and appropriately with drivers—for instance, avoiding rides for individuals who may exhibit threatening behavior, or who are unable to participate in the experience respectfully and safely.
2. **Help keep one another safe:** Our team works every day to help create safer experiences for everyone. That's why we have standards on account sharing, account holder age, and more. Organizations must ensure that only appropriate riders are booked—this includes not booking rides for unaccompanied minors (under 18), not requesting rides for individuals who are visibly ill with contagious conditions, and avoiding situations that could put riders or drivers at risk. Ensuring accurate rider details also helps promote accountability and safety for everyone involved.
3. **Follow the law:** We're committed to following the law and earning your trust. We expect everyone who uses our apps to do their part and adhere to applicable local, state, and federal laws.

Empowering movement together

Help us change the way the world moves for the better. Our Community Guidelines require you to:

- **Treat others with respect**
Regardless of characteristics like race, sexual orientation, economic background, gender, ability, religion, and culture.
- **Report if anything's wrong**
If you feel unsafe or experience discrimination of any kind while using Uber, report it in the app so we can take action.
- **Help us hold everyone accountable**
Any Uber app user whose rating falls below a certain threshold can lose access to their account.

By using the Uber app, you agree to follow these [guidelines](#).

I accept

Book the Ride Type Matching the Rider's Needs

Select the most appropriate ride option to ensure patient comfort, safety, and timeliness.

UberX: Economy curb-to-curb service with the largest network of drivers and a flexible 5-minute cancellation windows.

Who is UberX best for?

- Riders who can get in and out of the cars without assistance.
- Riders who are ready to be picked up or who can get to the vehicle within 5 minutes of arrival.

Uber Comfort: Comfortable curb- to-curb rides in larger vehicles, highly rated drivers and a flexible 10-minute cancellation window.

Who is Uber Comfort best for?

- Riders who need a little extra time getting from their door to an Uber vehicle.
- Riders who need extra room in the vehicle.

Uber NEMT*: Door-to-door and wheelchair rides with certified drivers/vehicles and convenient bookings directly on the Uber Health dashboard.

Who is Uber NEMT best for?

- Riders who need door-to-door service,
- Riders who use mobility devices
- Ride who may have medical, physical, visual, or mobility impairment

More Helpful Safety Reminders

We're always working to reduce safety incidents on our platform. But we can't do it alone—everyone who uses Uber plays a key role in the overall experience of our platform. Below are some more helpful safety reminders for you and your riders.

Wellness

- Uber Health is for non-emergency purposes only.
- Please follow local public health guidelines when considering whether to request a ride for a patient with an infectious disease.

Rider Experience

- Set clear expectations with first-time riders—use [our guide](#) to share helpful rider pamphlets.
- Book trips with the rider's phone number to ensure they are sent ride/vehicle details before pickup.
- Use Uber Health's [Trusted Contacts](#) to send real-time trip updates to a designated person - especially if the rider doesn't have a cell phone.

Policy

- Minors under 18 must be accompanied by an adult — enter the adult's name and phone on the Uber Health dashboard, not the minors.
- Uber Health is best for riders who can enter/exit vehicles independently. [Drivers are expected to aid riders with assistive devices if asked.](#)

Delivery Safety

Same Day Prescription

Reliable Prescription Deliveries

- **Real-time tracking for coordinators:** order progress, ETA, and courier location.
- **Discreet packaging:** Opaque, unlabeled to protect patient privacy.
- **Proactive support:** Dedicated team for cases if missing or undelivered medication

Compliance & Accountability

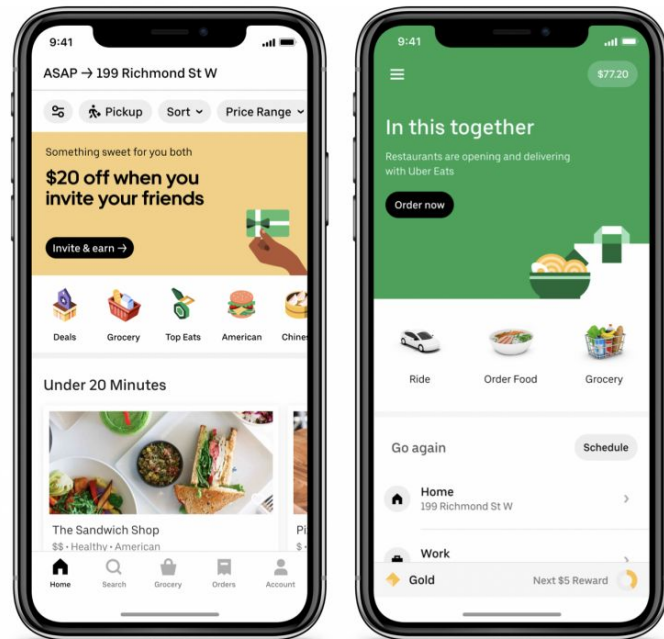

- **Proof of deliver:** Digital signatures captured via Uber Health Dashboard
- **Instant Alerts:** 'Attention Needed' notifications for delays or Cancellations.
- **Vetted Partners:** Third-party couriers undergo:
 - Federal/state healthcare exclusion checks
 - Driver license validation
 - Criminal background screening

On-demand deliveries

Convenient and reliable grocery deliveries that prioritize safety.

- **Partnerships for Food Safety Education:** We share education on practices for safely selecting, packaging, and delivering groceries with couriers. To date, we've had over 1 million couriers complete these food safety educational modules that align with 3rd-party expert [recommendations](#).
- **Accessible Safety Equipment for Couriers:** We encourage couriers to use insulated bags by making them available to couriers in our webstore.
- **Leveraging Data to Optimize Deliveries:** We are committed to reducing delivery times and food safety risks, and improve customer transparency by leveraging mapping data to more quickly, conveniently, and safely route couriers from the merchant to the customer."

Commitment to Women's Safety

We leverage our global reach and groundbreaking technology with human-centered partnerships to address key-issues facing the communities we serve.

Uber's Women's Safety Team

Uber has a dedicated Women's Safety team to help ensure that women feel safe while on an Uber trip.

Partnering on Safety

Our partnerships with leading advocacy groups help ensure we are aligned with best practices related to sexual assault and sexual misconduct response, prevention and education.
